More from Maximo®

Business Rules and Business Smarts to Drive Maximo Performance

Total Resource Management offers a bundled service that enables our clients to get more from Maximo®. It's a combination of integrated asset management strategies, reconfiguration expertise and RulesManager SE™. This service provides clients with:

- Quickly articulated business objectives for integrated asset management
- Fast and effective reconfiguration of Maximo, including interface/application integration design
- The most powerful software application available for manipulating, integrating or migrating Maximo to align with business objectives

RulesManager SE
TRM consultants and clients use RulesManager SE to make Maximo sing. We package our strategic and reconfiguration services with TRM RulesManager SE because we know that Maximo has to be aligned with business objectives in order to provide the value that's intended. Our proprietary RulesManager SE is the only software application and rules engine for Maximo that:

- Reduces time and expense to configure, integrate and manage the lifecycle of Maximo (and any technology that interfaces with it)
- Provides iron-clad data integrity with system-enforced business process rules
- Offers real-time feedback on Maximo screens with an interactive display engine
- Integrates all of your business applications (HR, Finance, ERP) with Maximo
- Enables the creation of Maximo applications tailored to specific industry needs

A Consulting *and* Technology Company

Starts with Strategy

TRM consultants can come into your environment and quickly develop an understanding of your business issues, using a well thought-out method of gathering data and information. This allows us to understand and develop integrated asset management strategies for any level or function of the business our clients want to improve; from the entire organization to maintenance departments across several locations to a singular department or operation.

From our years of experience, we know that when Maximo is configured properly, it can deliver better information than even financial systems. A smartly configured Maximo system will provide more details about the investment, costs and return on assets. It can show logical connections and, with relevant details needed to conduct asset management analysis, drive better decision-making. The return on investment in this technology becomes visible, with transparent logic.

> **TRM RulesManager SE™ is the first business process rules engine that brings all of the power of Maximo to your fingertips — in an intuitive, menu-driven, drag-and-drop, content-assisted, integrated development environment.**

Precisely Defined Assets

Once TRM consultants understand and frame the business issues that need improvement, the assets and their asset profiles are categorized and defined. We help you consider assets in terms of:

- Asset criticality
- Cost tracking
- Lifecycle tracking
- Supply chain and vendor involvement
- Repair/maintenance plans
- Spare parts management

We help define asset strategies that could include:

- Reliability/Availability
- Cost management
- Maintenance strategies
- Planned outage efficiency
- Planning and scheduling
  - » Work demand or backlogs
  - » Resource allocation
  - » Materials and tools

We even look at the work order entry process from both the asset definition and asset location hierarchy.

TRM consultants also present industry best practices and a variety of strategies, driven by the goal of improving your Return on Investment. Our analytic methods allow clients to understand the true value of the investments they make in assets.

> **RulesManager SE – The secret weapon for the fastest configurations, integrations and migrations and system-enforced business rules**

Maximo Reconfiguration

We do much more than recommend how assets should be managed to bring the highest return, we can actually help reconfigure Maximo to do all that and more.

Using the information produced during strategic engagements, we develop a complete implementation plan, including:

- Design
- Migration
- Configuration management methods
- Training plans
- Interfaces

TRM RulesManager SE enables our clients' Maximo systems to fully reflect the way their businesses should run and allows for:

- Faster implementations
- More intuitive user-entry screens
- Ongoing, self-sustaining configuration capability
- Reduced time and costs for:
  - » Development
  - » Deployment
  - » Support
  - » Upgrades

Your physical assets are a huge investment and the technology used to manage your assets (Maximo) is also a big investment. Make sure your investments pay off — let TRM help with our bundled strategic and reconfiguration services, and RulesManager SE.
